

5 Good Reasons...

Why you should replace your Windows Server 2008 and 2008 R2 license now (and one very good suggestion what you should do instead)

1. Not supported anymore!

As of January 14, 2020, Microsoft no longer supports Windows Server 2008 and 2008 R2. While mainstream support ended back in January 2015, even extended support has ended now. Technical assistance and OS updates are no longer available. If you are still running these OS versions and haven't upgraded to a currently supported version, you should do so immediately without further delay!

2. You won't get any security updates!

In times of cyber-crimes, any unsupported operating system will easily become an open door for anyone who wants to harm your company. Any "end-of-service" system potentially leaves you vulnerable to security threats and non-compliance issues.

3. Newer applications won't support it anymore!

Whether you are running simple workloads such as web hosting or complex workloads like a full-fledged ERP system, sooner or later when you want to update your applications you won't be able to do so until you upgrade your OS. New application versions also likely mean higher performance requirements.

4. Windows Server 2008 will not be certified for newer hardware!

You will not be able to set up new servers with Windows Servers 2008 or 2008 R2 anymore. Newer server models don't support these versions anymore.

5. It is harder to maintain older Infrastructure!

Running your aging infrastructure on older, unsupported OS versions makes it harder for you to maintain your systems. It's better to lay the foundation for a sustainable IT infrastructure today – to be well prepared for the future.

Windows Server 2019

The operating system that bridges on-premises and cloud.

Rely on a technology that grows with your requirements!

Keep in mind that your IT requirements will only keep growing as your business grows. Performance demands of newer application versions will only keep increasing. Look out for a scalable, future-proof platform that can adapt to your changing business needs. You need to look no further than Fujitsu PRIMERGY servers running Windows Server 2019 to meet the growing computing needs of your business.

Build your future now! With FUJITSU Server PRIMERGY and Windows Server 2019

Windows Server 2019, the latest Windows Server OS, is a much-anticipated successor to the fastest-adopted, best-selling Windows Server 2016. Windows Server 2019 significantly enhances its functionalities in the four of the most important areas of modern cloud-driven computing:

- hybridization,
- hyper-converged infrastructure,
- security and application platform.

Any new PRIMERGY running Windows Server 2019 can be re-deployed with our right-sized professional migration services. Prepare for the future and free up capacities of your IT staff – for the real challenges to come!
