Transition from your existing VMware Converged Infrastructure to a VMware Hyper-Converged Infrastructure.

What's new in PRIMEFLEX for VMware vSAN?

**Boost performance**

- **PRIMERGY RX2540 M7** with best VMware VMmark result for servers powered by Intel Xeon CPUs²;
delivers 3x better performance than RX2540 M5 and 2x better than RX2540 M6 ³.

- Leverage VMware vSAN 8 Express Storage Architecture architecture optimized for high-performance storage devices and boost performance by up to 4x, without compromising space efficiency.

**Reduce costs**

- **PRIMERGY RX2540 M7**: Get 3:1 consolidation ratio compared to RX2540 M5 and 2:1 to RX2540 M6.

- **PRIMERGY RX2540 M7**: Gain 15% power savings compared to RX2540 M6 ⁴.

- VMware vSAN 8 lowers storage TCO by up to 40% with enhanced data compression and adaptive storage efficiencies.

Enable cloud connectivity

- VMware vSAN seamlessly integrates with cloud services from AWS, Azure, or GCP delivering a common platform for on-premises and off-premises deployments.

- VMware vSAN allows to run legacy enterprise apps and modern cloud-native apps from a single platform.

- VMware vSAN accelerates cloud-native app development with cloud-native storage supporting all key storage API objects within Kubernetes.

- VMware vSAN delivers software-based deduplication and compression providing as much as 7x data reduction with minimal CPU and memory overhead.
