

For any business, managing and responding to threats is essential but not easy. Let us help you find the right approach.

Are you facing advanced phishing attacks and ransomware incidents? You are not alone, as most organizations continue to combat the increasing speed and complexity of cyber threats.

Meet Jane, a security lead tackling cyber security challenges similar to those you may be experiencing.

Watch how she keeps the organization secure

“Security leaders are increasingly cognizant that reducing the time to detect a threat is meaningless without a corresponding reduction in the time to respond to a threat to enable a return to a known good state.”

Gartner Research Market Guide for Managed Detection and Response services

We recognize that security leads are facing a multitude of challenges including:

1. **Shortages of skills and analysts.**
2. **Increased volume and sophistication of threats** – more time needed to optimize and upgrade tooling to keep up.
3. **Alert fatigue** – managing massive numbers of alerts coming from remote workers, IoT, endpoints, deployed detection systems, supply chain partners and hybrid networks.
4. **Time pressure** – all threats need to be resolved quickly before they become a serious breach.
