

Smart players adapt everywhere.

uSCALE for Virtual Desktops
by Fujitsu

#dontworryWORKhappy

Hybrid is here to stay. Remote workforces are the new reality – and organizations that wish to win the war for talent need solutions that support both mobile and on-premises working models, without compromising on security. Meeting these demands takes more than providing people with devices that allow to work from anywhere. In a hybrid environment, organizations need unified solutions for their infrastructure in a flexible model.

Resolve workplace challenges through virtualization

Classic architectures soon hit their limits when organizations seek to benefit from pay-as-you-go service models, optimize their licenses and deliver users a cloud-like experience wherever they are – while still maintaining excellent enterprise security for information assets. Fujitsu offers secure, reliable Virtual Desktop Infrastructure which leverages industry-leading VMware technologies and back-end technology into a single, scalable service, at a monthly rate per seat.

Fact file:

Fujitsu VMware-based VDI-as-a-Service

- Highly secure for different industries using for example ZTNA or VMware Unified Access Gateway and VMware vShield
- VDI services tailored to your needs based on VMware Horizon running on long-trusted, performant, and scalable data center infrastructure components
- Flexible uSCALE models transform capex to opex
- Complete VDI solution, including hardware, software and licenses for frontend and backend

Pricing per seat – pay what you use

Working with our partner VMware, Fujitsu provides VMware Horizon or VMware Workspace One as your working environment, both via VCPP licenses embedded in uSCALE.

With pay-as-you go uSCALE and VCPP pricing models for your VDI, you gain flexible, on-premises IT infrastructure as-a-service via monthly consumption-based billing based on actual usage. Pricing is consumption-based – which improves your cash flow and eliminates upfront capital investment. This leaves you more headroom to invest in strategic projects.

With VMware-powered VDI solutions from Fujitsu using uSCALE, you can:

**Flex your infrastructure
fast to changing
workload requirements**

**Pay as you go for data
center resources**

Staying secure

Security is a key priority across nearly every business sector. Manufacturers need to protect R&D ideas. Healthcare providers must meet strict requirements on patient data protection. In Finance, a data breach can quite literally break the bank.

Healthcare

Patient data security

Manufacturing

Patent-protected
engineering solutions

New work

Flexibility and
infrastructure design

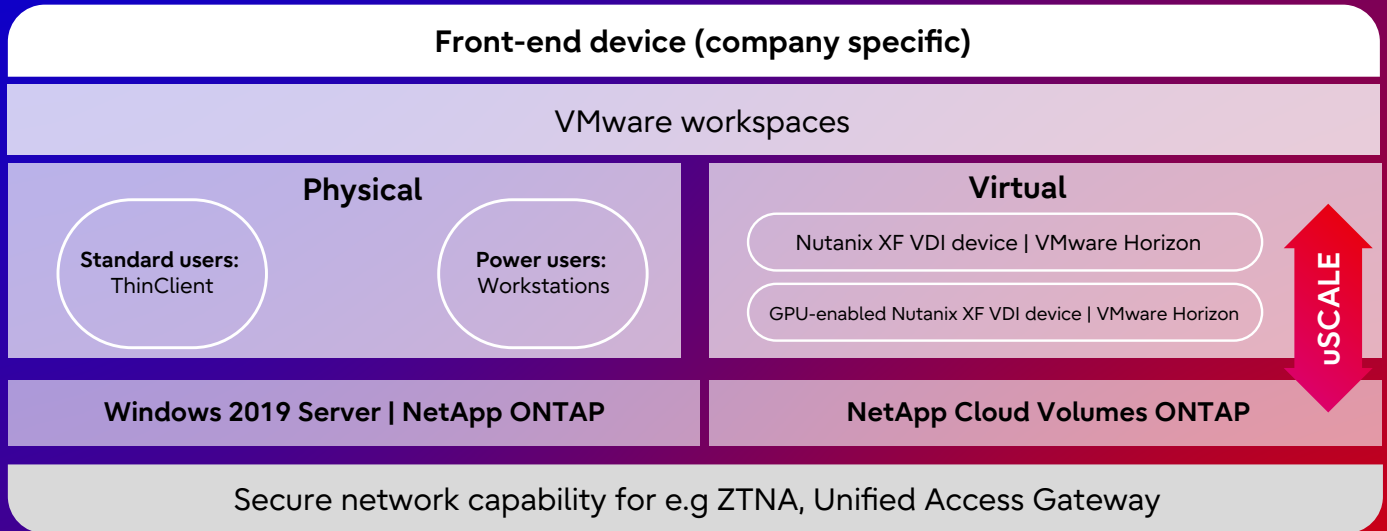

Finance

Ease of scalability

Fujitsu provides solutions around your security needs. For example, you can choose to lock down business data or limit end-user functionality. In all cases, you benefit from security that works from the server room to your end devices, ensuring zero-compromise system and data integrity. And of course, for any additional security, is subject to a review against the latest security threats, with the proposed remedial action agreed.

Technical architecture

Discover Fujitsu-based VDI-as-a-Service

We work with you to design a landscape around your business scenarios, using ready-to-deploy references at hand for quicker planning. We can take care of licenses and software – all at a monthly price per seat. Everything is from one source – there is no need to piece solutions together the DIY way.

This enables you to:

Drive operational efficiency

Better manageable costs

Implement a replicable end-user experience at scale
